- Recommended maximum - 400hp
- Service speeds - 5 to 45 knots

### Options

- Engine type and size
- Inboard or outboard
- Colours/Branding
- Trailer
- Clear Perspex enclosure
- Safety Packages

### The boat

The Aquapro manufactured SeaTaxi is built around the proven, dependable RIB (rigid inflatable boat) concept. As with all Aquapro products the SeaTaxi is a rugged, reliable, quality vessel that is stable and reassuringly safe. The Aquapro SeaTaxi is a RIB, therefore; it can come ashore jetties and other craft without risk of damage. Being a planning hull, the Aquapro SeaTaxi is designed to operate at speeds from 0-40 knots. With the option of twin outboards you will have excellent control and maneuverability, in any harbour, marina or alongside a vessel. Seating places your passengers with wide-open views! The roof protects passengers from sun and rain with the high sides giving protection against the sea.

### Your investment

The relatively low capital cost of the Aquapro SeaTaxi offers exceptional economic income. Efficiency in its speed of operation and high payload passenger carrying capacity ensures a lucrative return on investment. Careful design has resulted in a craft that can be operated by one person, reducing the cost of staffing overheads. We offer packages that can accommodate your countries safety requirements and can ship you a vessel which, when unwrapped is ready for business - just add water!

### Maintenance

A trailerable craft, the Aquapro SeaTaxi can be easily and cheaply removed from the water for storage, cleaning and servicing. Careful attention to design detail has resulted in a craft that requires very little on-going maintenance apart from occasional cleaning and engine servicing.
